

Introduction

流域简介

Keelung River 基隆河

大稻埕碼頭
Dadaocheng Wharf

淡水河主流大漢溪從海拔3,529公尺的品田山發源，匯流新店溪、基隆河後出海，流域內涵蓋了亞高山針葉林（冷杉林帶）、山地針葉林（鐵杉、雲杉林帶）、針葉混生林（臺灣、扁柏、紅檜）、針闊葉混生林、闊葉林（櫟林帶、楠櫈林帶、榕楠林帶）、紅樹林。除了更高的玉山圓柏林與更熱的熱帶海岸林，臺灣常見的林型都可以在淡水河流域見到。

Originated from Mt. Pingtien of 3,529 m asl, Dahan River, the main stream of the Tamsui River, runs through Taipei basin and merges with the Xindian River and the Keelung River in Taipei City. The river basin of the Tamsui includes diverse vegetation zones, i.e., cold-temperate fir forests, cool-temperate hemlock and spruce forests, warm-temperate lower Quercus forests, subtropical broadleaved forests (*Machilus*-*Castanopsis* spp.), and mangroves. Except subarctic juniper shrub and tropical coastal forests, almost all the forest types in Taiwan can be found in Tamsui basin.

Xindian River 新店溪

大稻埕碼頭
Dadaocheng Wharf

Except subarctic juniper shrub and tropical coastal forests, almost all the forest types in Taiwan can be found in Tamsui basin.

Jingmei River 景美溪

新店溪沿岸並無大面積的濱溪草本植物群，在少數地點有小叢的布袋蓮、空心蓮子草生長；濱溪木本植物群以水柳為優勢樹種。河階自生木本主要以構樹、山黃麻、血桐、小葉桑等陽性次生樹種為主，偶可見棗果榕與白肉榕。河階邊坡護坡多為草本植物，以象草、五節芒為主。

木本植栽集中在河濱公園附近，以榕樹株、白榕（垂榕）水柳較多，其他數量相對較多的植物包括榔榆、茄苳、水黃皮、朴樹、構樹、垂柳、雀榕等。其中構樹為原生樹種。

Only in some sites we can see scattered riparian plants such as common water hyacinth (*Eichornia crassipes*) and alligator weed (*Aldemarthera philoxeroides*). Water willow (*Salix babylonica*) is the dominant tree species in this region.

The native tree species in river terrace are paper mulberry (*Broussonetia papyrifera*), India charsil trema (*Trema orientalis*) and Japanese mulberry (*Morus australis*)。A big Konishi fig (*Ficus variegata*) occurs at 150 m a.s.l. in Wanhsin Creek, a branch of Jingmei River in Taipei City. Upstream above this tree, it is less modified by human activities maintains nature condition, and has some bamboo plantation. Downstream of this tree, we can see tree species such as Japanese mallotus (*Mallotus japonicus*), macaranga (*Macaranga tanarius*), and turn-in-the-wind (*Mallotus paniculatus*)。

Tree species can be found in the riparian parks along the river. Among them, Chinese banyan (*Ficus microcarpa*), Banjamen fig (*F. benjamina*), and water willow (*Salix warburgii*) are the most common tree species. Some easily seen plant species include Chinese elm (*Ulmus parvifolia*), autumn maple tree (*Bischofia javanica*), pongamia (*Pongamia pinnata*), Chinese hackberry (*Celtis sinensis*), paper mulberry (*Broussonetia papyrifera*), weeping willow (*Salix babylonica*), and fruit fig tree (*Ficus superba*). Paper mulberry is native tree species.

雙溪在臺北市境內的支流菁薯溪是士林區的水源頭，「菁」指的是製作藍染料的大青，「薯」指坑池。先民於溪邊以石塊堆積成凹池，用來浸泡大青，製作藍色染料，稱為「菁薯」。本溪的上游可見菁薯。

內溝溪，目前中下游幾乎全段整治。木本植物以水麻、密花芋、筆筒樹、水同木最常出現。水生植物只有李氏禾、光葉水菊、粉綠狐尾藻、銅錢草、空心蓮子草等，僅偶有出現。在岩石上或岩縫的植物有全緣卷柏、鱗蓋鳳尾蕨、鳳尾蕨、小葉冷水藤等。

Southern Shuang Creek, Shuang Creek and Neigong Creek are the major branches of the Keelung River in the northern part of Taipei City. Although most of these creeks run across developed areas, the riparian region hosts some native vegetation that are unique and helpful to human activities. For example, *Strobilanthes cusia* is the plant that people used it as a dye source. Dominant tree species include macaranga (*Macaranga tanarius*), India charcoal trema (*Trema orientalis*), paper mulberry (*Broussonetia papyrifera*), edible debregeasia (*Debregeasia orientalis*), dense-flowered false-nettle (*Boehmeria densiflora*), common treefern (*Cyathea lepifera*) and milk tree (*Ficus fistulosa*).

Jingmei River 景美溪

景美溪沿岸天然植被群與新店溪相似，但少了適應低鹽份環境的植物。溪畔大面積原生濱溪植群僅出現在新店和河濱公園附近，優勢植物以水柳為主，雖河較遠處有構樹、山黃麻、小葉桑等陽性次生樹種。

萬壽溪為景美溪在臺北市境內的支流之一，在海拔150公尺左右有一棵齡花榕大樹，往下是溪溝整治區，往上游則維持自然狀態。整治區喬木以野桐、血桐、白匏子較常出現。未整治區有不少竹林，溪溝原生植物有大葉楠、刺杜密、森氏紅淡比等。

The native vegetation in Jingmei River are similar to those in Xindian River with exception that no plant species can tolerate salty environment. Native riparian vegetation only occur in Funie River Park. Water willow is the dominant species. Paper mulberry (*Broussonetia papyrifera*), India charcoal trema (*Trema orientalis*) and Japanese mulberry (*Morus australis*) can also be found.

A big Konishi fig (*Ficus variegata*) occurs at 150 m a.s.l. in Wanhsin Creek, a branch of Jingmei River in Taipei City. 萬壽溪為景美溪在臺北市境內的支流之一

河濱特色植物介紹

Guide to Some Unique Riparian Vegetation

艾草
Asiatic wormwood
Artemisia indica

科名: 菊科 Family: Compositae
花期: 3-10月 Flowering: 3-10
果期: 4-12月 Fruiting: 4-12
海拔: 3200m以下 Elevation: below 3200 m

光果龍葵
American black nightshade
Solanum americanum

科名: 茄科 Family: Solanaceae
花期: 2-10月 Flowering: 2-10
果期: 3-12月 Fruiting: 3-12
海拔: 2500m以下 Elevation: below 2500 m

金腰箭舅
Horseherb
Calyptocarpus vialis

科名: 菊科 Family: Compositae
花期: 1-8月 Flowering: 1-8
果期: 2-9月 Fruiting: 2-9
海拔: 500m以下 Elevation: below 500 m

穗花棋盤腳
Small-leaved barringtonia
Barringtonia racemosa

科名: 玉蕊科 Family: Lecythidaceae
花期: 6-9月 Flowering: 6-9
果期: 1-3月 Fruiting: 1-3
海拔: 10m以下 Elevation: below 10 m

水筆仔
Kandelia obovata

科名: 紅樹科 Family: Rhizophoraceae
花期: 6-8月 Flowering: 6-8
果期: 8-10月 Fruiting: 8-10
海拔: 10m以下 Elevation: below 10 m

小葉冷水麻
Artillery clearweed
Pilea microphylla

科名: 蕁麻科 Family: Urticaceae
花期: 1-12月 Flowering: 1-12
果期: 1-12月 Fruiting: 1-12
海拔: 1600m以下 Elevation: below 1600 m

臺灣蛇莓
Mockstrawberry
Duchesnea chrysanthia

科名: 蕃薇科 Family: Rosaceae
花期: 3-7月 Flowering: 3-7
果期: 4-8月 Fruiting: 4-8
海拔: 2400m以下 Elevation: below 2400 m

一枝香
Lony ironweed
Vernonia cinerea

科名: 菊科 Family: Compositae
花期: 1-12月 Flowering: 1-12
果期: 1-12月 Fruiting: 1-12
海拔: 1500m以下 Elevation: below 1500 m

齒蕨
Coast leather fern
Acrostichum aureum

科名: 鐵線蕨科 Family: Adiantaceae
花: 不開花 Flowering: none
果: 無果實・具孢子 Fruiting: none
海拔: 20m以下 Elevation: below 20 m

霍香薊屬植物
Ageratum plants

科名: 菊科 Family: Compositae
花期: 1-12月 Flowering: 1-12
果期: 1-12月 Fruiting: 1-12
海拔: 2000m以下 Elevation: below 2000 m

紫花霍香薊
Tropic ageratum
Ageratum houstonianum

科名: 菊科 Family: Compositae
花期: 1-12月 Flowering: 1-12
果期: 1-12月 Fruiting: 1-12
海拔: 2000m以下 Elevation: below 2000 m

水柳
Water willow
Salix warburgii

科名: 菊科 Family: Compositae
花期: 1-12月 Flowering: 1-12
果期: 1-12月 Fruiting: 1-12
海拔: 2000m以下 Elevation: below 2000 m

水賣皮
Pongamia pinnata

科名: 豆科 Family: Leguminosae
花期: 5-9月 Flowering: 5-9
果期: 8-10月 Fruiting: 8-10
海拔: 1200m以下 Elevation: below 1200 m

構樹
Paper mulberry
Broussonetia papyrifera

科名: 桑科 Family: Moraceae
花期: 3-4月 Flowering: 3-4
果期: 6-9月 Fruiting: 6-9
海拔: 1000m以下 Elevation: below 1000 m

瞿香薊
Whitewood
Ageratum conyzoides

科名: 菊科 Family: Compositae
花期: 1-12月 Flowering: 1-12
果期: 1-12月 Fruiting: 1-12
海拔: 200m以下 Elevation: below 200 m
