Every year, medical staff and students from all over the world come to our hospital to observe and learn clinical medicine, home-based medical care and long-term care, home-based palliative care, nursing management, hospital management, and others. Our hospital also takes the opportunity of training international health and medical professionals to enhance international medical and health exchanges.

International medical personnel training

International visits, exchanges and cooperation

Benchmarking based talent cultivation

International symposiums

Besides helping international academic units understand the efforts and practical experiences of Taipei City Hospital in the promotion of home-based medical care, long-term care, dementia care, and home-based palliative care, we have signed memorandums of understanding with world-renowned international education and research institutions. We also actively promote international research cooperation, research support, academic and medical community exchanges, and staff and technology training in international academic cooperation.

Taipei City Hospital (TCH) has been training and sending outstanding colleagues to study abroad in advanced medical research institutions to learn the most updated clinical technic and translational medicine applications. On returning to Taiwan, they are expected to contribute what they have learned to help develop featured medical services and clinical teaching, form the teaching and administrating human power network, and continue improving the medical quality and holistic care services of TCH.

We regularly organize international symposiums to share valuable experiences, exchange research findings and practices, and publish papers with foreign scholars in order to refine and elevate medical research in Taiwan, and in the meantime, strengthen the understanding of medical institutions, academics, and the nation on holistic care and palliative medical care, and promote the elderly-friendly caring community together.
