

## **Road-construction management with public supervision embedded and cooperation of department of ethics guarantees the delivery of quality results.**

Through the Ministry of Foreign Affairs, AAC invited the leaders of anti-corruption agencies of 5 nations from Central America (Guatemala, Belize, Nicaragua, Honduras, Dominican Republic) to participate the seminar of establishing a uncorrupted government, via exchanging ideas on the integrity of such system, upon the notion of the administrative transparency guarantees positive results. On April 25 2018, a special trip was taken, visiting Taipei Road Pipeline and Information Center (hereinafter referred to as the Road Management Center), as one of the most significant projects of Taiwan's plan of building an uncorrupted government. Guided by the representative of Taipei City Government, Vice Mayor Deng Jiayi, the experience on how the fraud and malfeasance can be prevented is discussed and exchanged with foreign guests.

Staffs are sent to work together 24-hours a day by both the municipal governments and the pipeline units of private sectors, providing first-hand information on the progress of Taipei City road construction over smart devices to our citizens, thereby facilitating public supervision functions, introduced by Road Management Center.

The Road Management Center is also pioneering the certifying system for pipeline excavation staff, incorporated the designated courses of the clean government regulations and ethics-related curriculum, installing the concepts of ethics on road-construction personnel, hence improving the quality of construction work and service standards.

With the experience of technological management of road construction, the three-dimensional mapping system for underground pipelines and cross-agency and inter-departmental support that effectively reduces road construction-related frauds, the representatives of our friendly nations including the President and Minister of Justice of Guatemala, the Attorney General and Minister of Justice of Belize, Deputy Attorney General of Nicaraguan, Director of General Administration's Office of Corruption and Reconnaissance of Honduras, Chief of Corrupt Practices Investigation Office of Dominican Republic, expressed their impression on Taipei City's commitment of building a 3D information system of the underground pipelines and the degree of transparency of such, stirring the interest and inspiration on knowledge-sharing towards road construction management technology.
