**摘要：**為便於管理，圈養下靈長類的餵食內容及方法通常單調無變化。本研究於台北市立動物園進行台灣獼猴 (*Macaca cyclopis*) 餵食豐富化。依據野生猴群的食性及覓食模式，修改飼料內容及餵食方式，增加食物種類，提供低熱量食物、未加工食品及綠色葉類，營養成份較接近靈長類的需求，並於餵食過程中將食物分散、藏匿且不過度處理。餵食豐富化後有效延長覓食時間，活動模式更接近野外族群。

**關鍵字：**台灣獼猴、餵食豐富化、活動模式、營養成份

# Feeding enrichment of Formosan macaque (*Macaca cyclopis*)

Shu-Mei Chen\* Chin-Ming Chen\* I-Mi Chen\* Shiang-fan Chen\* Ming-Hsung Chang\*

**Abstract:** The feeding schedule and content of captive Formosan macaque (*Macaca cyclopis*) are usually boring and changeless for easy management. We use feeding enrichment based on wild monkey's foraging pattern and foraging habits, including increasing food diversity, adding lower calorie food、natural food and leaves, spreading food throughout the enclosure, hiding food in several kinds of device, and reducing food processing. These help to extend foraging period, that makes their activity pattern and nutrient requirement similar to wild ones.

**Key word:** Formosan macaque、feeding enrichment、activity pattern、nutrient composition
