

TB OUT

Tuberculosis (TB) is an airborne disease.

Please keep indoor environment ventilated.

Signs and symptoms of active TB include: a cough lasting 2 weeks, cough with phlegm, weight loss, no appetite, fever, or chest pain. Please see a doctor if you have a persistent cough over 2 weeks.

When one got TB, local health bureau will provide DOTS services to ensure that the patient safely takes the medication and help the patient complete the treatment.

If you have close contact with a TB patient, please cooperate with public health department and undergo a contact examination needed.
