# No radionuclide detected in Feitsui reservoir water.

Release Date: June 16th, 2011

In react to Fukushima Daiichi Nuclear Power Plant accident,Taipei Feitsui Reservoir Administration (TFRA) took reservoir water sample to Nuclear Science and Technology Development Center of National Tsing Hua Uinversity to examine the nuclear pollution and no radionuclide was detected as of June 15th.

After the Fukushima nuclear crisis, TFRA monitored the water quality strictly. Since March 18th, TFRA took reservoir water samples and sending them to a specialized nuclear examination laboratory for a thorough examination. So far, twenty nine examinations have been executed and no radionuclide was detected in each exam.

TFRA will keep monitoring the radiation level continuously and providing safeties to our nation’s water source.
